ABOUT THIS DOCUMENT

Cavalier is a navite mobile app that is looking to help motorcycle riders to increase routes sharing and collaboration among riders to enlarge their community circle.

This document is going to evaluate the usability of the wireframe low scale prototype of Cavalier base in 4 tasks, through two rounds of usability tests, that will help to tweak or improve could be to the design with the purpose to create a better experience for the end user.

JULIETH FAJARDO

CAVALIER

HOW MIGHT WE QUESTION

HOW MIGHT WE
USE TECHNOLOGY TO EXPAND AND
RE-THINK ROUTE SETTINGS
TO IMPROVE RIDERS
EXPERIENCE AND SAFETY?

HOW MIGHT WE
INCREASE
IDEA ROUTES SHARING AND
COLLABORATION AMONG
RIDERS TO ENLARGED
THEIR COMMUNITY CIRCLE?

BRIEF SUMMARY

KEY RESEARCH INSIGHTS

After examized all the results from users pain point, frustrations, motivations a goals, I divided this results in 3 main topics:

- Riders safety: Riders want to make sure that they are prepared for the ride ahead, knowing what they are going to encounter or how to prevent barriers like speed limits, traffic, etc.
- Belonging Community: One of the most attractive parts of having a motorcycle is the idea of being part of a group, but in some cases some communities or locations don't count with the infrastructure to meet other riders or don't have many riders around
- Adventure: This is maybe one of the main reasons why people get a motorcycle, for fun!

Each of them are really specific in its own but they have a common thread safety while riding alone or in a group and fellowship. That is why I believe that allowing the documentation of trips, and sharing experiences with like-minded people will achieve social integration and community belonging.

JULIETH FAJARDO

CAVALIER

"I DO SOLO AND GROUP RIDES, BUT PREFER RIDING IN GROUPS. IT IS SAFER TO RIDE IN A GROUP ON SMALL SCOOTERS THAN IT IS TO RIDE ALONE AND IT'S MORE FUN." BRIAN

EPIC AND TASK PRIORITAZION

The epic that was chosen is the one that is going to help the rider to feel safe while riding and save the ride for future reference. As a secondary epic is the one that involves community and riders with the same values, find a another riders in your are and check their profile.

EPIC

Track and save my ride

TASKS

As I rider, I want to check the weather to determinate if I want to go or not for a ride

As I rider, I want to adjust my setting to make sure I will feel safe while riding

As I rider, I want to simply press track before before to make sure that my ride gets record

As I rider, I want to visualize the distance and the average speed of the ride so I can stay on top of it in or have it as a reference for the future

As I rider, I want to pause my ride in case I have to stop to allow have flexibility on my ride

As I rider, I want to resume my ride so that I don't have to start all over again

As I rider, I want to have opportunity to save my route so that I can access to it in the future

As I rider, I want to have a visual path of my ride, so that I can have a better understanding of where I went

As I rider, I want to name the ride so that i can identify from other rides

As I rider, I want to add a specific type if ride so that I can identify it from other rides

As I rider, I want to add a drescriptions do that I when I share it with other riders they know what are they going to encounter

As I rider, I want to add photos to my ride so that I can have a easier recall of where I went

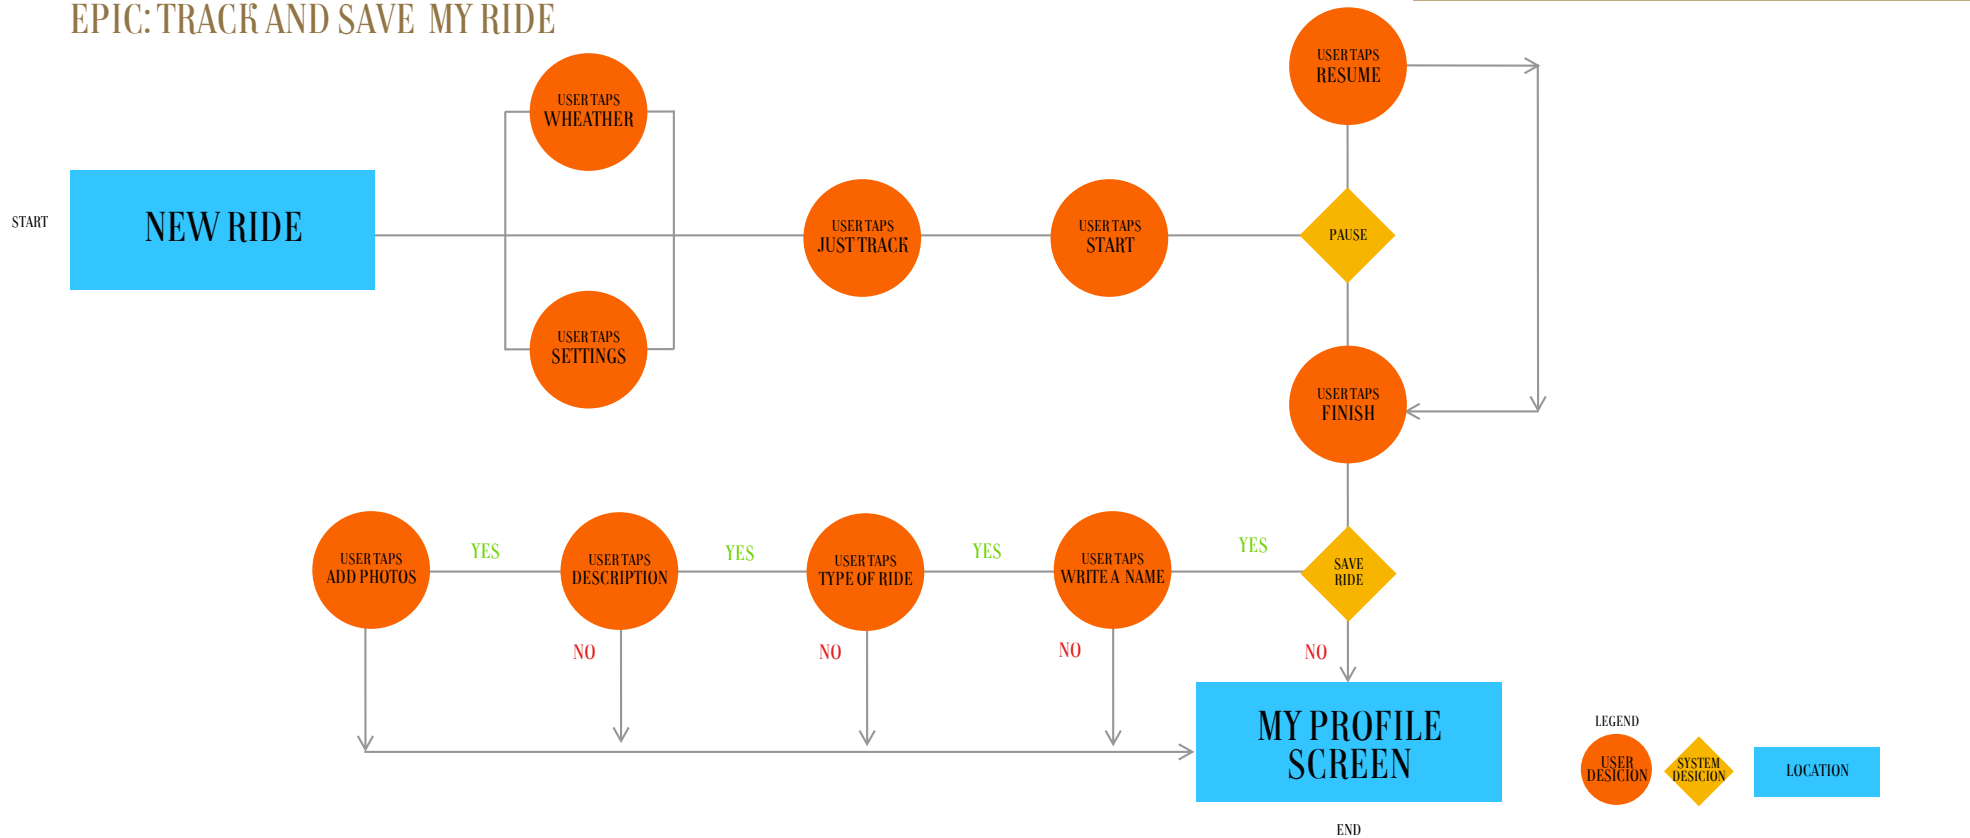

As I rider, I want to add tips so if another riders does the same ride they know what to expect

As I rider, I want to have the ability to make my ride private or public so I have options to share or not specific rides

As I rider, I want to see all my rides in one place so I can access easily to them

TASK FLOW

EPIC: TRACK AND SAVE MY RIDE

EPIC AND TASK PRIORITAZION

EPIC

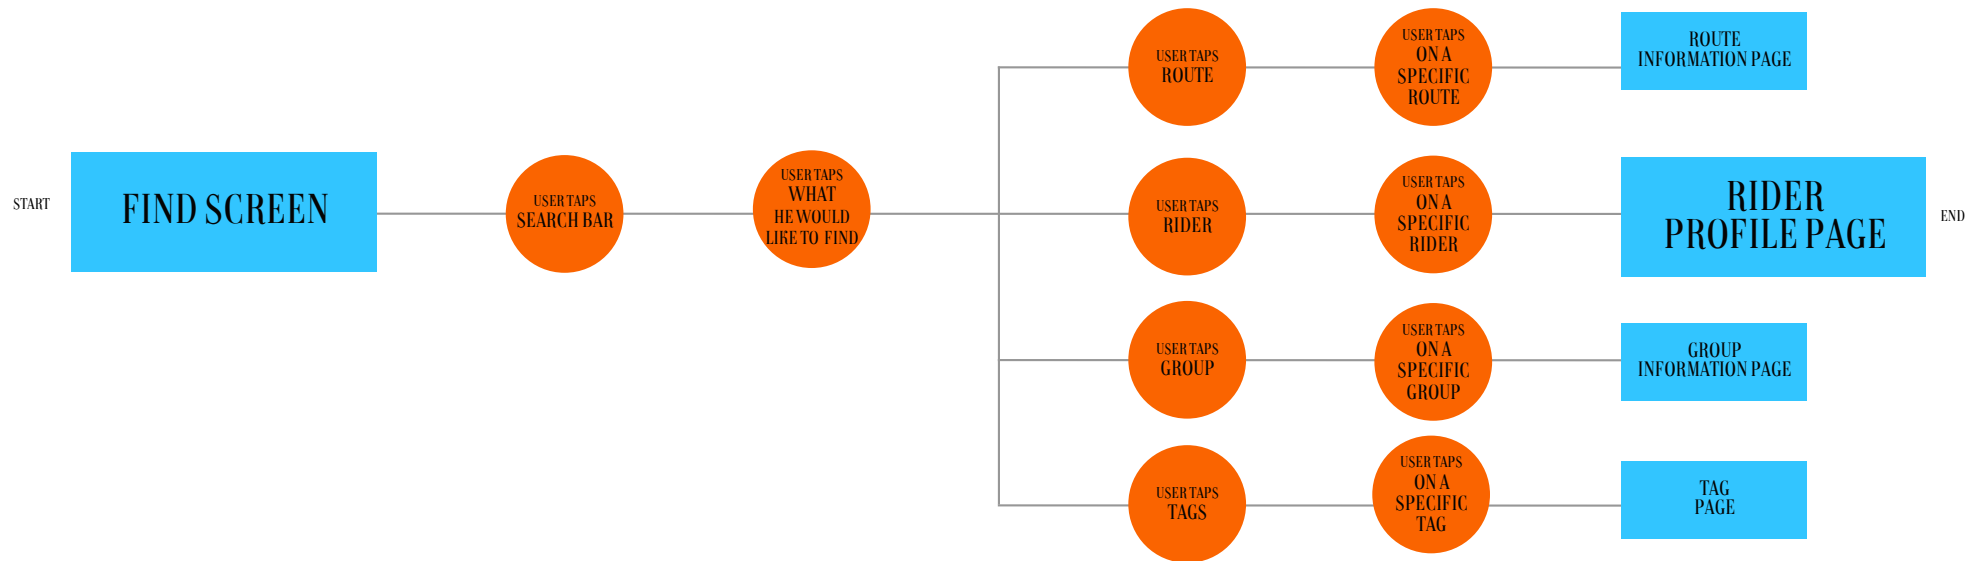

**Find another rider in your area and
check their profile**

TASKS

- As I rider, I want to be able to find riders around my area so I can follow them
- As I rider, I want to see other rider profiles so I can check their rides
- As I rider, I want to see other rider profiles so I can chek their media
- As I rider, I want to see other riders profiles so I can chek their riders friends
- As I rider, I want to be able to find rides around my area so I can get inspiration for my own rides
- As I rider, I want to be able to find group around my area so I can join them
- As I rider, I want to be able to find different motorcycle topis through tags so I stay inform on my favorite topics
- As I rider, i want to see other riders achivements/badgets to I know what other badges I can add

TASK FLOW

EPIC: FIND ANOTHER RIDER IN YOUR AREA
AND CHECK THEIR PROFILE

USABILITY TEST

ROUND 1

Introduction

As part of the project Cavalier design process, I plan to conduct a usability test with about 4-5 users in order to obtain practical, real-time feedback that can be incorporated to improve the design, in order to provide a more optimal user experience.

Scenario brief

Brand new user: Abdul, new rider in Vancouver

Never had used a motorcycle app, but he is really familiar with google maps.

He is not really familiar with Vancouver streets, speed limits, highways, traffic, etc.

Cavalier app will be user's first product touchpoint to record his rides, find new rides, new friends/riders

Goal

To created an account, track a ride and check another rider profile.

User testing Round 1 objectives

- Allow participants to explore their journey through the application without bias or preconceptions
- Create a user testing output documents that will help to to fix, improve and the overall tasks and design
- Test the flow of the tasks
- test the overall design and interface components
- Identify the elements in the design that cause problems
- Identify the severity of the problems
- Identify aspects in the design that are successful and effective
- Develop a plan for making design improvements for Round 2

Participants criterias

- Motorcyclists with different types of experience from novice to expert
- Not cilindraje or motorcycle type limitation

Demographics

Men or Women

19-65 years old

Recruitment methods

Facebook motorcycles and scooters groups

Instagram stories

INTERVIEW GUIDE

Warm up

Before we start I want to ask you if it is ok to record this conversation, the recording will only be used to help to figure out how to improve the site and it won't be heard by anyone except me and my teacher. Mostly it won't help me, so I don't have to take that many notes.

Hi There, thank you so much for taking the time today to help me, as I told you I'm a student at BrainStation for a UX design diploma and the main project that I'm working on is what I'm going to show you today.

As part of the project Cavalier design process, we want to conduct usability tests with about 5 users in order to obtain practical, real-time feedback that can be incorporated to improve the design, in order to provide a more optimal experience.

The first thing I want to make clear right away is that we are testing the app, not you. So there is not going to be a wrong answer at all.

As you use the app, I'm going to ask you as much as possible to try to think aloud: to say what you are looking at, what you are trying to do, and what you are thinking. This will be a big help to us.

Let's start!

General Questions

1. How long have you been riding for?
2. Why did you start riding?
3. What type of motorcycle do you have?
4. Main reason that you use your motorcycle?

Specific questions Task 1, Onboarding as a new User

1. What do you think this app is about?
2. If you were a first time user how would you like to open an account, imputing your email or using your facebook account? Why?
3. Now that you are on the main screen, and you can see a little more about this app, what else can this app help you with?

Specific questions Task 2.A, Prepare for a ride: Check weather and adjust settings

4. What is the first thing that you would check before going for a ride?
5. Let's check the weather
6. Where would you check your settings for a ride?
7. Are these settings enough? Or would you like to add or remove some? Why?

INTERVIEW GUIDE

Specific questions Task 2.B, record your ride and save it for future references

Today is a beautiful day in Vancouver and you have been waiting for a sunny day for a while, so you just want to get on your bike without a specific route in mind and ride.

8. What would you do to just start tracking your ride?
9. You are at a red light and want to expand the view of your time and distance, how could you do that?
10. You have wanted to take a photo of this part of the city for a while so you would stop for a moment to enjoy the view and take those photos. How would you do that?
11. Now you are ready to continue your ride
12. Now you are back home and want to make sure that you save this route for future references. Could you please show me how can you do that?
13. What do you see on this screen?
14. Do you find it beneficial to have these types of routes for you to choose from? What else would you like to see on that list?
15. Description
16. You would like to add photos to this ride, please pick the the 3 photos on the top

17. Now you can save it
18. What do you see on this screen? (My routes)

Specific questions Task 3, look for riders in Vancouver and check a profile

19. Something that caught your eye when you were getting a Cavalier app is that you could find friends in your area. How would you do that?
20. You live in Vancouver and want to find riders in your area, how would you do that?
21. Mike looks like a cool guy, so you want to check his profile, how would you do?
22. What do you do to see his profile?

Before we finish I would like to know your overall feedback and if is something that you would like to add or remove from it.

Well that is all for today, you did great and definitely you gave me really useful comments and insights that will help me to make my project better.

I hope that you had a good time too. Because you helped me today I would love to say thank you by give in you and your motorcycle a 30min photoshoot. I am going to send a link later today with my availability, so you can pick a date and time if you decide to do the photoshoot.

Again thank you so much and have a great day.

SESSION OUTPUT

ROUND 1

Executive summary

User testing round 1 happened from Sunday May 17 to Monday May 18 2020, all via zoom meeting, where users shared their screen while using the invasion prototype.

The main purpose of this user testing was to evaluate the overall design and 4 tasks, open an account as a new user, check weather and adjust settings, record a ride and save it for future reference and find riders in Vancouver and check a profile. For this first round of testing, I had the chance to interview 4 people, 3 riders and 1 non riders.

The overall usability of Cavalier was positive, the major issues found in this round was related to the meaning of the icons, button sizes and how riders would like to find other riders. But something that was definitely surprising that riders liked and approved the settings to make their ride more secure, but recommended that feature for new or novice riders.

Evaluation tasks

Task 1: Open an account as a new user

Users could choose how to do this, or opening a new account, or by using the testing mode feature.

Task 2: Check weather and adjusts setting for a ride

As any rider they will make sure that weather is appropriate to go for a ride by determining the weather in Vancouver. Also users will make sure that the settings for their ride are appropriate.

Task 3: Record a ride and save it for future reference

Users were directed to record a ride without a location in mind and asked to save the ride. For this task it was important to determine the importance of:

all the information given at the end was enough for a rider or if I will need more data

the different options given to fill out while saving a ride was relevant or not, or if they would choose something different.

Task 4: Look for riders in Vancouver and check a rider profile

Users had the chance to look for riders in their area, but something important in this task is to determine how important it is for riders to find other riders, the usability of the search option and asking users what they see on other riders' profiles.

INTERVIEWER NOTES

INSIGHTS

USER TESTER 1: GURPEET 30 YEARS OF EXPERIENCE 7 MOTORCYCLES

- Everything around his life is related to motorcycles, from his job, what he does for fun and for relax.
- He chose to enter the cavalier through the Try without registration. In the past he had registered to motorcycles apps that he didn't like, so he wanted to make sure that it was a good match for his expectations.
- He found the setting for the ride good for new riders, but not really useful for riders with experience like him.
- He would like to see at the end of his record ride the top and lower speed, the minute by minute speed.
- He let me know the importance of battery life while using the app, one of the most important features he looks for in any motorcycle app.
- He didn't like too much to have to look into other riders' profiles if he didn't know them in advance.

JULIETH FAJARDO

USER TESTER 2: BRUNO 15 YEARS OF EXPERIENCE 750 CC SPORT BIKE

- He had more than 15 years of experience, his main reason to ride is for fun and adventure
- He chose to enter the cavalier through the Try without registration, because he doesn't like to share his personal information until he finds that the app is a good match for his expectations.
- He found the setting for the ride good for new riders, but not really useful for riders with experience like him.
- It was not easy and clean for him to find the just track button.
- He would like the app to determinate when the rider stopped and when resume
- He suggested that the photos should be uploaded automatically in the specific location that was taken and shown on the map route.
- The magnifying glass was not clear to find new friends, instead he chose to pick the friends icon.
- He would rather go for a ride, instead of finding friends by looking on their profiles.

CAVALIER

USER TESTER 3: CESAR 3 PLUS YEARS OF EXPERIENCE 550 CC SPORTBIKE

- He liked that we could access to the app with the help of facebook, so he didn't have to re-write his information
- Setting were useful for him, it something that he would liked to have when he started riding
- It was easy to record a ride, enough information at the end
- It was useful to have different types of pre set riding types, so he can easy reference on the future
- He liked that he had the option to make his ride public or private
- He enjoyed the different badges that other rides can get

USER TESTER 4: TAMMY NO RIDER VANCOUVER

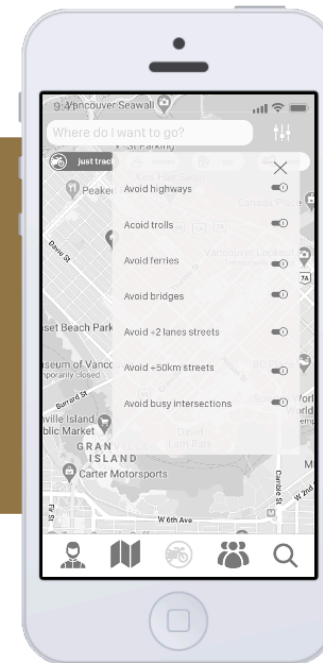

- Icons were not clear, it was not easy to find my rides or how to find friends
- She didn't go to magnifying glass to find friends, instead she clicked on her friends icon.
- Vocabulary for adjusting the settings
- Icon for my rides is not clear, why is a folding map

20

OVERALL TESTING RESULTS

TASK ANALYSIS ROUND 1

	Task 1 Open an account as a new user	Task 2 Check weather and adjusts setting for a ride	Task 3 Record a ride and save it for future reference	Task 4 Look for riders in Vancouver and check a rider profile
Gurpreet	Yes Tryout mode	Yes Settings are good for new riders	Yes Would like to see extra information at the end of a ride	Yes Would like to meet riders on rides instead
Bruno	Yes Tryout mode	Yes Settings are good for a new riders	Yes Would like to see extra information at the end of a ride	Yes Would like to meet riders on rides instead
Cesar	Yes Though Facebook	Yes Settings are good for a new riders	Yes	Yes It is nice to see other riders in my area
Tammy	Yes	Yes	Yes	Yes
Task Average	Overall task is easy to move around, doesn't need to get fix or change	Overall task was easy to move around. It need some changes on vocabulary and icons colours	Overall good functionality, just some additional functional that could be add in the future	Overall good functionality, but most of the riders would like to find other riders while doing group rides

OVERALL TESTING RESULTS

TASK ANALYSIS ROUND 1

Task 1: Open an account as a new user

- Overall task is easy to move around, doesn't need to get fix or change

Task 2: Check weather and adjusts setting for a ride

- Overall task was easy to move around. The tester found it useful to have settings that are easy to adjust. They suggested that these settings could pre set when doing their profiles.

- It needs some changes in vocabulary

Accoid trolls

Avoid major crash intersections

Task 3: Record a save a ride

- They got confused by the color of the button, didn't know if it was activated or not
- They found it really easy to initiate a ride and record it
- They will like to see extra data so they could compare with future or past rides and motorcycle values
- They found it really useful to see an overall view of the track they did
- They would like the app to be able to stop or resume the ride without them pressing any buttons

Task 4: Look for rides in Vancouver and check a rider profile

- All users didn't click on the magnifying glass to find new riders, instead they clicked on their friends icon.
- Most of them found that they didn't want to check other rider profile, instead they would like to join a ride in order to meet people
- In overall all users found riders in Vancouver and it was easy to check other riders' profiles. Not major changes to do in this task

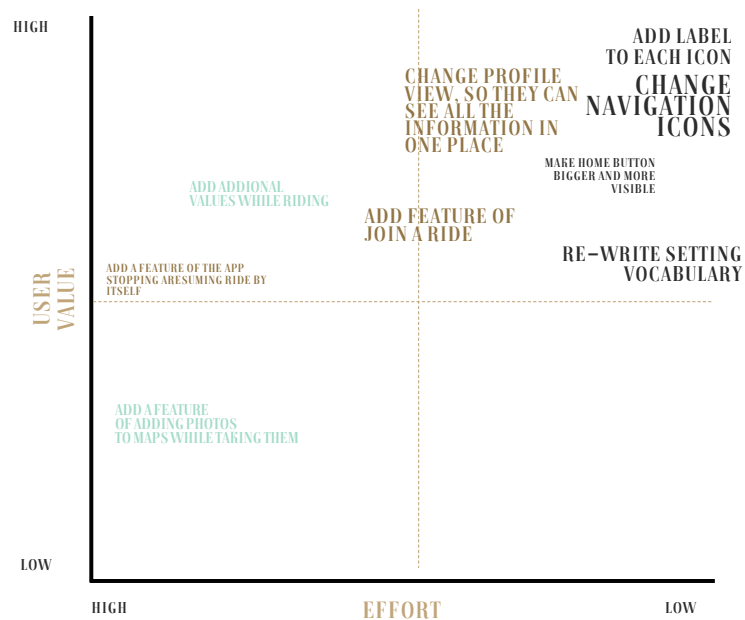

Conclusion

Users had an overall good experience through Cavalier. The changes that are going to be done for round two are:

- Re writing some of the settings
- Re evaluation of the navigation bar icons, making them more understandable by adding labels to icons, so user doesn't have to overthink about what it could be the icon about
- Re design the view of user profile, so they can find all their information in one place instead of going to different place; making it more familiar looking (taking inspiration from Instagram/Pinterest)
- Adding the task of joining a ride, so riders can find other friends without having to look to profiles

ACTION PLAN

DESIGN UPDATE

Design updates

The main idea of the updates are to improve the overall user experience, based on the feedback on round 1 testers. They are going to be divided based on user value and effort. The following list of issues will be ranked on the combination of less effort + more user value to more effort + less value or features that could be added if there is time and resources.

1. Add label to each icon on the navigation bar
2. Change some of the navigation icons
3. Make home button bigger and more visible
4. Rewrite setting vocabulary
5. Re-design profile view, so user can find all his information in one place
6. Add feature of join a ride

The following issues are not going to be developed in the next face.

7. Add additional values to record while riding, like low-high speed per minute
8. Add feature that app will stop and resume by itself
9. Add feature of adding photos to their ride on the specific place was taken

“RIDES ALONE CAN BE
CATHARTIC AND MEDITATIVE
ALMOST. GROUPS ARE FUN
BECAUSE THE DYNAMICS OF
OTHER RIDERS MAKE IT FEEL
LIKE AN ADVENTURE YOU’RE
ALL IN TOGETHER.” MELISSA

JULIETH FAJARDO

CAVALIER

PAPER IDEATION

ROUND 2

TASK: JOIN A RIDE

EPIC AND TASK PRIORITAZION

EPIC

Join a group ride

TASKS

As I rider, I want to see rides happening around where I live so I can join

As I rider, I want to see rides base on my level of experience so I can can join other riders knowing that I feel safe

As I rider, I want to see where I'm going to meet the other riders so that I can plan ahead of time

As I rider, I want to see the starting time so I can plan ahead of time

As I rider, I want to see the distance of the rider so I can know if I feel prepare for that ride

As I rider, I want to see the level of the other rider so that I can make sure that I match the same level as them

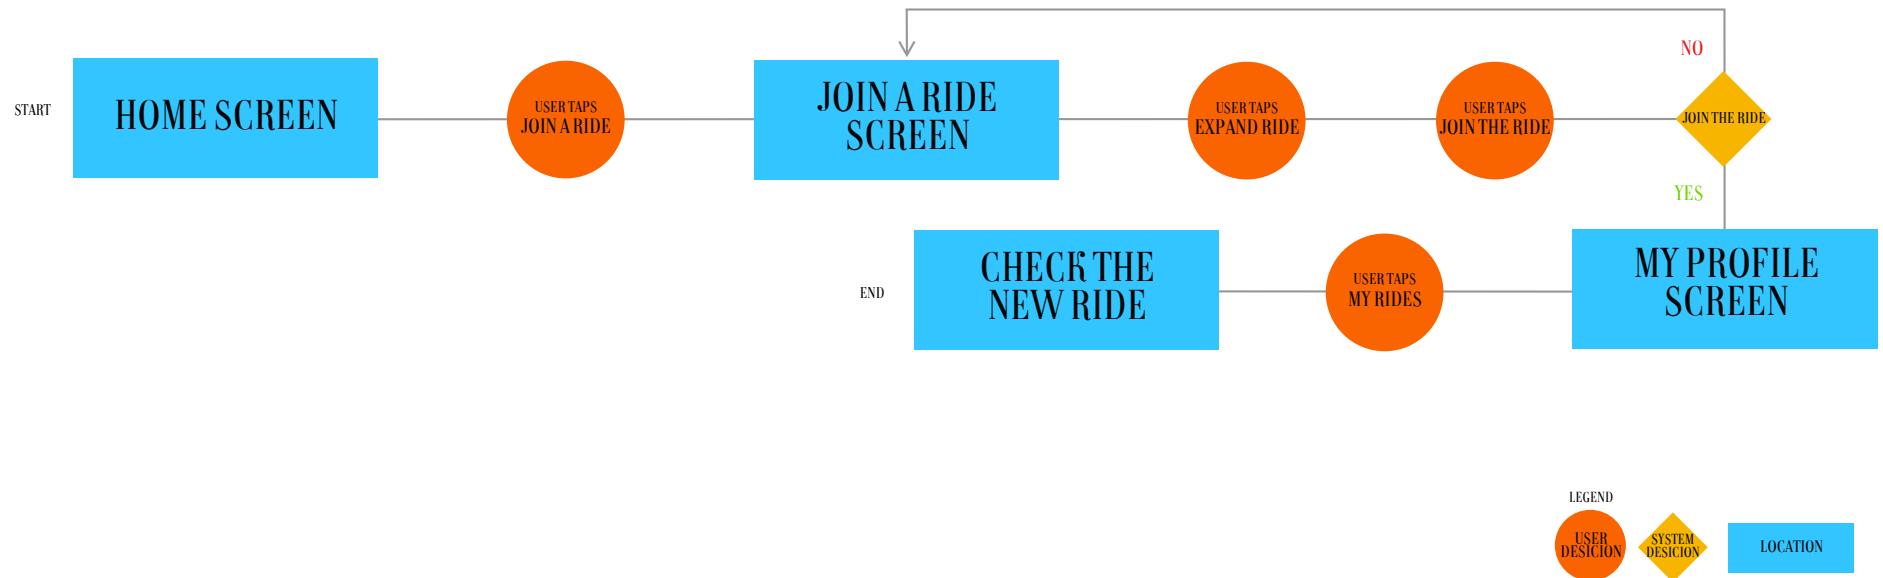

As I rider, I want to see number of rider are going to the ride so I can make sure that I feel comfortable with that number

As I rider, I want to see the description of the ride so I know what to expect

As I rider, I want to see the profile of the other rider so I know who else is going to the ride

TASK FLOW

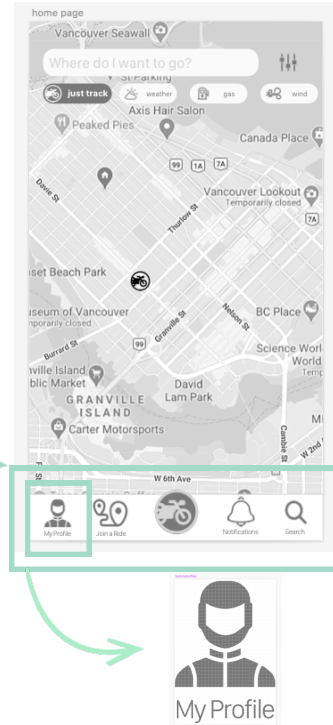

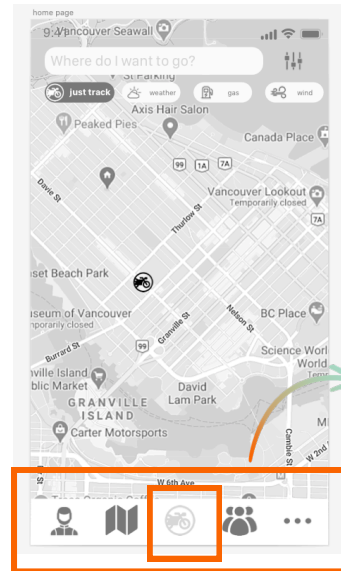

EPIC: JOIN A GROUP RIDE

INTERFACE CHANGES

- Make home button bigger and more visible

- Navigation bar icons updated, condensing icons by:

Profile icon/page icon: It contains routes, riders/friends, media and groups. So user can find all his information in one place

Join a ride icon: After the user test 1, users found that it will be more effective to find or meet new riders by joining a group ride.

Home page icon: Stay the same by bigger

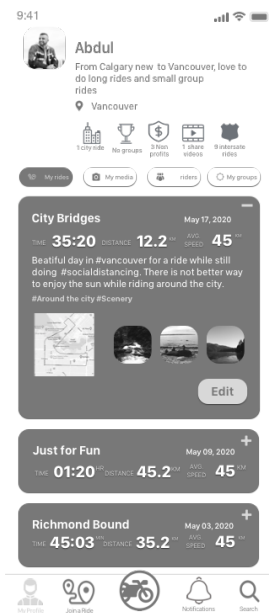

Notifications icon: User could find all the notifications related to upcoming rides, messages, new badges, and followings from other riders.

Magnifying glass icon: user will be able to find new routes, group, other rides and motorcycles related topics through tags

- Addition of labels to each icon

INTERFACE CHANGES

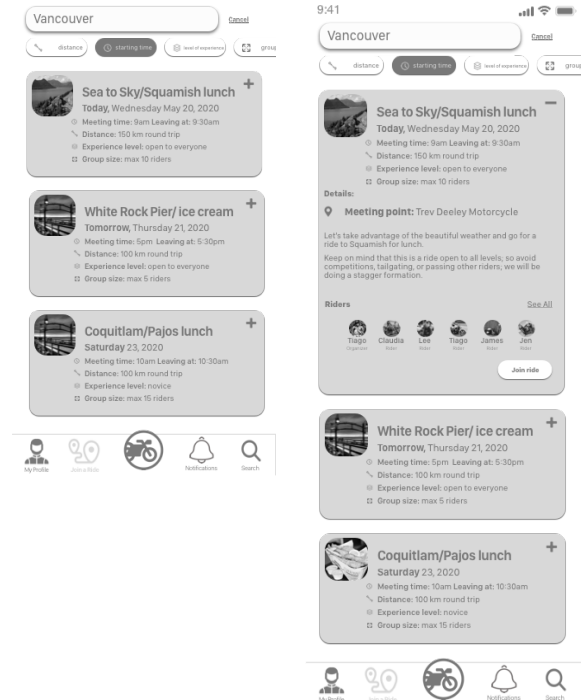

PROFILE

Profile page: It contains routes, riders/friends, media and groups. So user can find all his information in one place

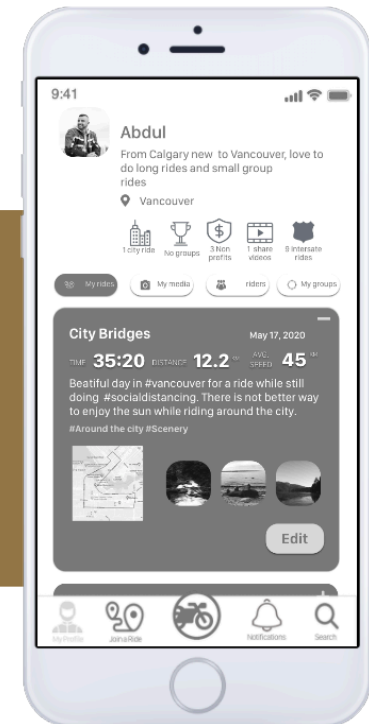

JOIN A RIDE SCREEN FLOW

USABILITY TEST

ROUND 2

Introduction

After user testing round 1, the following changes have been made to improve the overall experience of the user:

1. Add label to each icon on the navigation bar
2. Change some of the navigation icons
3. Make home button bigger and more visible
4. Rewrite setting vocabulary
5. Re-design profile view, so user can find all his information in one place
6. Add feature of join a ride

For User Testing Round 2, I am going to use the same scenario of round one, but I am going to add a task, Join a ride. Beside that I am going to make sure that all the design updates make sense for the user and that they have improved any usability issues; and they are not considered problems anymore.

Scenario brief

- Brand new user: Abdul, new rider in Vancouver
- Never had used a motorcycle app, but he is really familiar with google maps.
- He is not really familiar with Vancouver streets, speed limits, highways, traffic, etc.
- Cavalier app will be the user's first product touchpoint to record his rides and meet riders by join a group ride.

JULIETH FAJARDO

Goal

To create an account, track a ride and check another rider profile.

Participants criterias

- Motorcyclists with different types of experience from novice to expert
- Not cilindraje or motorcycle type limitation

Demographics

Men or Women

19-65 years old

Recruitment methods

Instagram stories

CAVALIER

SESSION OUTPUT

ROUND 1

Executive summary

User testing round 2 happened from Tuesday May 19 to Wednesday May 20 2020, all via zoom meeting, where users shared their screen while using the invasion prototype.

The main purpose of this user testing round 2 was to evaluate the changes made from design updates result of round 1 and the new task of Join a group ride. For this round 2 of testing, I had the chance to interview 4 people, 2 riders and 2 non riders.

The overall usability of Cavalier was positive, the changes made from round 1 really helped the overall experiences of the testers. They found easier their information, by having everything related to their profile in one place. There was no issue while asking them to join a ride, they really liked all the information displayed.

Users that were riders kept asking for extra features to be added when saving a route like:

- Max-Min speed per minute
- Allow app to upload photos on the specific location that was taken
- Profile photo could be replace by the icon
- The view of save rides could include a small version of the track on the no expand it view, instead of the speed and distance

Evaluation tasks

Task 1: Open an account as a new user

Users could choose how to do this, or opening a new account, or by using the testing mode feature.

Task 2: Check weather and adjusts setting for a ride

As any rider they will make sure that weather is appropriate to go for a ride by determining the weather in vancouver. Also users will make sure that the settings for their ride are appropriate.

Task 3: Record a ride and save it for future reference

Users were directed to record a ride without a location in mind and asked to save the ride. For this task it was important to determine the importance of:

all the information given at the end was enough for a rider or if I will need more data

the different options given to fill out while saving a ride was relevant or not, or if they would choose something different.

Task 4: Join a group ride

Users had the chance to join a ride around his area, something important in this task is to determine if the information is relevant or if more or different information needs to be added to it.

INTERVIEWER NOTES

INSIGHTS ROUND 2

USER TESTER 1: EMILY 7 YEARS OF EXPERIENCE 2 MOTORCYCLES

- She started because her boyfriend has a motorcycle and she got hook after riding with him
- She likes that she can find all the information related to riding in one place: weather, gps tracker, routes building, finding new riders and joining a group ride.
- She appreciated the settings that could be use for new or less experienced riders
- She would like to make sure that she is not sharing his location
- She suggested to have a little more information about the riders that will join the group ride: Type of bike, cc

USER TESTER 2: TIAGO 2 YEARS OF EXPERIENCE 390 CC SPORT BIKE

- He was never into motorcycles but after having a difficult year, he decided to do something new and now riding is one of his favorite things to do.
- Add speed as KM/HR for the route view
- I don't know if Just track is activated or not. And why is the same as the home button
- He found useful as a new user the badges, something to achieve. He is really competitive.
- He would like to see the photos on the map, so if he wants to do a route, he would know where to stop or what to look forward

USER TESTER 3: LEE NON RIDER

- Overall good experience with Cavalier
- He appreciated the design, he would like to see how the grey would turn into color to know the feeling of the app
- He didn't find wind important, or maybe something that should be just include on weather

USER TESTER 4: ARMANDO NON RIDER

- Really clean and easy to follow design
- Make font bigger on the onboarding screens
- Maybe setting icons looks like filters
- It really easy to follow for the inspiration base on google maps
- Just track icon on main screen is not clear that is active or not active

OVERALL TESTING RESULTS

TASK ANALYSIS ROUND 2

Task 1: Open an account as a new user

- Overall task is easy to move around, make terms and policy font bigger

Task 2: Check weather and adjusts setting for a ride

- No issue found in this task, but Just track button color on home screen need to be the same color as the other, so user will know when is active or not.

Task 3: Record a save a ride

- Not issue found in this task.
- But user that were riders will like to see more data when saving the ride like: high-low speed per minute, and that they can visualize the ride map track even on non expanded view.
- They will like to have a confirmation after add a new ride, instead of just going to their profile.

Task 4: Join a group ride

- It was easy for user to find how to join a group ride.
- The label really helped users to find the icon easier.
- All user found the information relevant on the event, but they will like to see a map or route that they are going to follow
- They will like to see more information from the other riders like: experience level, cc, motorcycle type.

JULIETH FAJARDO

CAVALIER

OVERALL TESTING RESULTS

CONCLUSION AND NEXT STEPS

Conclusion and next steps

For the user testing round 2 the main objectives were validated, by having a positive interaction with the new icons and the adding labels, making much easier for testers to find and follow the task. But regarding labels the Just track needs to match the other button on the home screen, so users know when it is active or not.

Definitely testers that were riders keep finding important to add extra information when saving the ride like, low-high speed per minute and adding the location of the photos they took by the app placing them on the map, so if they share the route other riders could find that useful. So this could be something that could be added as an extra feature, but mostly it will be determinate for the technology and cost of adding that feature.

Something that came out too was the importance of having validation after saving a ride, or when getting a new badge. Something that can easily be added by adding a pop up modal that lets the user know that the ride has been saved and that he got a new badge that will be added to his profile.

Conclusion is going to be really important to determine the right color on the next step of this project, mostly because I want to keep Cavalier clean and easy to navigate. But I feel really positive with the overall feedback of the users testing after both rounds, knowing that the design updates that are going to be made are going to elevate the user experience.

Next is a list of those changes, racked by High user value + low effort to Low user value + high effort:

1. Change the color of Just track button, it will match the other buttons. So users won't get confused about active or inactive mode.
2. Add onboarding screen, where new user could find all the relevant information of how to use and what they will find on Cavalier
3. Make the text on sign in/create an account bigger
4. Add a pop modal after saving a route, so users know that they successfully did it.
5. Add a pop up modal after getting a new badge, so users get excited about the feature and want to share and do more rides.
